JENETRIC – PIONEERS in DIGITAL FINGERPRINTING

JENETRIC are experts in digital fingerprint capturing. We develop and manufacture biometric fingerprint scanners that meet today's requirements for simplicity, mobility and a multipurpose usage.
Our products are based on a holistic design. We focus not only on technical parameters, but much more on a noticeable simplification of fingerprint capturing for operators, agencies and users.

Our biometric fingerprint scanners **LIVETOUCH QUATTRO**, **LIVETOUCH QUATTRO Compact Up**, **LIVETOUCH DUO** and **LIVETOUCH Flipcase** represent a new class of compact and user-friendly devices that help to simplify and improve the fingerprint capture process.

At border controls, in local authorities, in banks, at elections – fingerprints are used everywhere today to provide security and prove identity. This new range of applications requires devices that can be used regardless of the language, culture and education of the users. This is exactly where we invest our creativity, our know-how and our energy to provide you with innovations on the cutting edge of technology.

LIVETOUCH QUATTRO

The fingerprint scanner that understands you.

LIVETOUCH QUATTRO is a FBI certified, super compact forensic ID Flat and tenprint scanner. Based on JENETRIC's e-c-thru technology, the scanner combines unmatched user friendliness with highest quality fingerprint images.

Its integrated touch screen provides easy to understand instructions that reduce failure-to-enrol rate and shorten the capture process.

With its compact design, ultra-light weight and simplified operation, **LIVETOUCH QUATTRO** integrates easily into livescan stations and enrollment systems in any operating environment.

LIVETOUCH FLIPCASE

Your phone. Our sensor.
The perfect match for taking fingerprints.

The **LIVETOUCH Flipcase** is a truly lightweight combination of the **LIVETOUCH QUATTRO Compact** with a smartphone.

The unique design of the robust housing with solid snap mechanism ensures a safe one-hand operation when capturing fingerprints.

Whether unfolded or folded, full access to the buttons and camera of the smartphone is always given.

LIVETOUCH DUO

Two fingers. One Sensor.

Our **LIVETOUCH DUO** is the most compact FAP 45 dual-finger scanner available on the market. Its low weight and minimized size along with the low power consumption make it the first choice for mobile identity capture and verification.

The **LIVETOUCH DUO** combines highest image quality certified flat and rolled fingerprints with a secure and encrypted connection between the scanner and the computer.

Supported by Windows and Android™, **LIVETOUCH DUO** is perfectly suited for the integration into portable or mobile acquisition systems.

TOUCHLAB SDK

Versatile, flexible and feature-rich Software Development Kit.

Our **TOUCHLAB SDK** provides the best interface for comfortable and fast integration of JENETRIC's fingerprint scanners into customer applications.

Our API enables full access both to the scanner and a broad range of sophisticated features making the capture process as easy as possible. Equipped with segmentation, NIFIQ 2.0 quality check, license management for rolled fingers and electronic signatures, **TOUCHLAB SDK** supports tailored applications with LIVETOUCH scanner portfolio. Thereby comprehensive test tools and integration samples are available for both Windows and Android operation systems.
