

## Press Release

### **Highest quality throughout the company: JENETRIC certified successfully**

#### ***German biometrics company meets ISO 9001-2015 quality management requirements***

Jena, 01.06.2017

JENETRIC's innovative fingerprint scanners combine highest security standards with easiest handling. During the course of the last year the company has received multiple awards therefor. As of now all JENETRIC departments are ISO 9001 certified – starting from development, via production, human resources and sales to service. The certified quality management increases transparency of operational processes, aims at high customer satisfaction, secures a smooth communication with suppliers and helps to reduce costs, as the failure rates in the company can be decreased.

„Our company complies with the most important national and international quality management standard. We are pleased to offer our customers highest quality in all areas – from production and order processing all the way to sales and service“, says Roberto Wolfer, one of the founders and CEO of JENETRIC.

With the increase of production capacity, ISO certification was strongly focused on procurement, production and sales processes relating to the LIVETOUCH quattro and LIVETOUCH quattro Compact produced in Jena.

*JENETRIC GmbH was founded in 2014 in Jena, Germany - a location famous for cutting-edge optical technology - by engineers with longtime experience in fingerprint technology and has specialized on the development on biometric systems. The multidisciplinary team includes hardware and software specialists as well as production and sales professionals. The company follows in its product development a holistic approach clearly oriented towards customer requirements - with the ambitious goal of improving the living and working conditions through the use of biometric systems.*
